

# Shifting Sands Wordsearch

Our Shifting Sands project is based in the Brecks - the Brecks straddles the Norfolk and Suffolk border. It is one of the most unusual landscapes in lowland England, with vast conifer plantations and large arable fields edged with lines of crooked pines. It developed from an ancient landscape of sandy, chalky soils, wide open heaths, sheep walks, medieval rabbit warrens and shallow river valleys. This is one of the most important areas for wildlife in the UK

Can you find the following species in this project:

Grey Carpet Moth

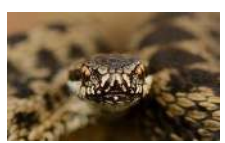

Woodlark

Grayling Butterfly

Forester Moth

Adder

Spring Speedwell

Wormwood Moonshiner Beetle

Common Lizard

Nightjar

Stone Curlew

Basil Thyme

Tree Pipit

Dingy Skipper Butterfly

Small Heath Butterfly

Annual Knawel
